## Question: 1

Which of the following is a characteristic of Near-Line SAS (NL-SAS) drives?

Response:

- A. Faster than SAS drives
- B. Slower but more economical than SAS drives
- C. Equal in performance to SSDs
- D. Mainly used in consumer electronics

**Answer: B**

## Question: 2

A low cache hit ratio in a storage system might suggest which of the following issues?

Response:

- A. Too much cache allocated to the system
- B. Not enough cache memory
- C. Disk drives are too fast
- D. Front-end ports are underutilized

**Answer: B**

## Question: 3

Why would an administrator configure a high queue depth in a storage array?

Response:

- A. To decrease latency
- B. To increase latency
- C. To prioritize certain types of I/O requests
- D. To handle more simultaneous I/O operations

**Answer: D**

## Question: 4

---

In a storage system, what does read I/O flow typically involve?  
(Choose Two)

Response:

- A. Data movement from disks to cache
- B. Data movement from cache to front-end ports
- C. Data verification processes
- D. Parity generation

**Answer: A,B**

### Question: 5

Effective interpretation of RAID level performance typically requires understanding of which metrics?  
(Choose Three)

Response:

- A. Read/write ratio
- B. Rebuild times
- C. Power consumption per disk
- D. Parity calculation times
- E. Queue depth per disk

**Answer: A,B,D**

### Question: 6

What distinguishes Flash storage from traditional spinning disk technology?  
(Choose Two)

Response:

- A. Absence of moving parts
- B. Lower energy consumption
- C. Higher data security
- D. Faster data access speeds

**Answer: A,D**

### Question: 7

---

\_\_\_\_\_ is a performance feature of SVOS that optimizes data placement on the disk to improve efficiency.

Response:

- A. Dynamic Tiering
- B. Dynamic Provisioning
- C. Dynamic Pooling
- D. Dynamic Resizing

**Answer: A**

### Question: 8

How would you interpret high disk latency in a storage system?

Response:

- A. Efficient disk performance
- B. Potential disk failure
- C. High efficiency of the caching mechanism
- D. Indication of underutilized capacity

**Answer: B**

### Question: 9

The main advantage of using \_\_\_\_\_ over traditional SSDs is their much lower latency and higher endurance.

Response:

- A. Flash
- B. SAS
- C. SCM
- D. NL-SAS

**Answer: C**

### Question: 10

What role does 'capacity forecasting' play in performance analysis with Ops Center Analyzer?

Response:

- A. It helps in determining when additional storage is needed based on current trends.

- 
- B. It calculates the maximum number of users the system can handle.
  - C. It determines the environmental impact of the storage system.
  - D. It assesses the profitability of the storage investment.

<b>Answer: A</b>
