Question: 1

In what scenario is SMB preferred over NFS in a mixed network environment?
Response:

A. When systems require case-sensitive file access
B. When most clients are Unix-based
C. When there is a need for native Windows support
D. When encryption is not a priority

Answer: C

Question: 2

What advantage does link aggregation provide besides increased bandwidth?
Response:

A. Reduces the power consumption of network devices
B. Allows the use of multiple IP addresses per device
C. Provides network redundancy to prevent single points of failure
D. Enhances the encryption level of data transmission

Answer: C

Question: 3

In a Hitachi NAS environment, what is an essential security measure for user account management?
Response:

A. Regular password rotation
B. Mandatory multi-factor authentication
C. Guest account enabled by default
D. Use of shared accounts

Answer: A

Question: 4

Cluster read cache is particularly beneficial for which type of workload?
Response:

A. Write-heavy workloads
B. Compute-intensive tasks
C. Read-intensive workloads
D. Network-intensive processes

Answer: C

Question: 5

How do Hitachi NAS systems enhance data retrieval performance?
Response:

A. Caching frequently accessed files
B. Defragmenting stored data
C. Prioritizing read requests
D. Compressing data at rest

Answer: A

Question: 6

When configuring a tiered storage pool, which factor should be considered to optimize performance and cost?
(Choose Two)
Response:

A. Color coding of drive bays
B. Type of data being stored
C. Expected data access patterns
D. Geographic location of servers

Answer: B,C

Question: 7

What aspect of Hitachi NAS systems allows for the integration with cloud environments?
Response:

A. Multi-protocol support
B. Elastic scaling
C. Gateway functionality
D. Native cloud connectors

Answer: D

Question: 8

How are system drives typically configured in a Hitachi NAS to ensure data protection?
Response:

A. RAID configuration
B. Single drive allocation
C. No redundancy
D. All drives as independent units

Answer: A

Question: 9

Which clustering feature ensures data availability in the event of a node failure?
Response:

A. Load balancing
B. Vertical scaling
C. Fault tolerance
D. Data mirroring

Answer: C

Question: 10

Why might an organization opt to configure both NFS and SMB on a Hitachi NAS system?
Response:

A. To reduce the overall cost of the system
B. To increase the complexity of the network
C. To accommodate a diverse range of client operating systems
D. To decrease network traffic
